THESIS

Thesis

Strong engineering work is often undervalued because it is presented as a wall of text. Interface systems can turn architecture into something inspectable, faster to trust, and easier to discuss.

PRINCIPLES

Principles

A hiring surface should reduce interpretation cost while preserving honesty.

- Make the system map visible.
- Pair motion with explanation, not decoration.
- Let evaluators choose depth instead of forcing one reading path.
- Keep assets modular so content can evolve without redesign.

PORTFOLIO TRANSLATION

Portfolio translation

Surface	Role in the narrative
Hero + WebGL	Creates a memorable first model of the work.
Architecture diagrams	Explains how subsystems connect.
AI assistant	Answers evaluator questions in-context.
Publications library	Adds research depth without cluttering the landing page.
